The development of estimators of population parameters based on two-phase sampling schemes has seen a dramatic increase in the past decade. Various authors have developed estimators of population using either one or two auxiliary variables. The present volume is a comprehensive collection of estimators available in single and two phase sampling. The book covers estimators which utilize information on single, two and multiple auxiliary variables of both quantitative and qualitative nature. The estimators discussed in the text are based upon different mechanisms of the availability of auxiliary information, termed here as Full, Partial and No Information. Multivariate estimators in survey sampling are also discussed in the book. Two Phase Sampling will prove an invaluable point of reference for researchers working in the field of survey sampling in general and in the field of two-phase sampling in particular.

Since the establishment of Pakistan in 1947, the country has announced more than 15 education policy regimes directing the improvement of education. Each policy has been ambitious in its aims and critical of past failures. A common feature of all policies, plans, programs, and schemes, however, is that all of them have failed to achieve their objectives. Even programmes using international resources have been unsuccessful in significantly changing Pakistan's education sector. The country has been well-advised over the past decade by local, international and donor agencies regarding what is not.
