Electronic, Automatic Transmission (EAT) has drastically evolved over the past two decades due to increase in global technological advancement and the need to have highly efficient automobile with improved fuel economy. Though modern EAT could be easily diagnosed for shifting problems with a mere scan tool and an oscilloscope they are not necessarily easy to fix. Planetary gear controls, electronics and hydraulics of transmission has significantly changed, in the past years, it was the Modulator, Throttle valve, Accumulator and Governors that were used to control & regulate the hydraulic pressure and therefore the gear shifting of old cars. Everything is now computer controlled by an

onboard computer known as Power Control Module (PCM) or Transmission Control Module (TCM) depending on the make & model of the car. Electronically controlled Shift solenoids, Vehicle Speed Sensors, TPS sensor, MAP sensor & many more other sensors have replaced the Modulator, Throttle Valve and Governors making modern cars more efficient but however very vulnerable to any form of mechanical & electrical damages caused by rapid vibrations, thermal and electrical shorts. These Solenoids have very low resistances, in most cases not more than 10 ohms and are Duty Cycled by the PCM / TCM for that matter. Troubleshooting transmission problems is now divided into 3-set of problems, electrical, hydraulic and mechanical. This book will help you to distinguish those three problems.
