Statistics gives students valuable practice in interpreting statistical reporting as it actually appears in peer-reviewed journals. New to the eighth edition: A broader array of basic statistical concepts

is covered, especially to better reflect the New Statistics. Journal excerpts have been updated to reflect current styles in statistical reporting. A stronger emphasis on data visualizations has been

added. The statistical exercises have been reorganized into units to facilitate ease of use and understanding. About this book Each of the 64 exercises gives a brief excerpt of statistical

exercise covers a limited number of statistics, making it easy to coordinate the exercises with lectures and a main textbook. The questions in each exercise are divided into two parts:
(1) Factual Questions and

(2) Questions for Discussion. The factual questions require careful reading for details, while the discussion questions show that interpreting statistics is more than a mathematical exercise. These

questions require students to apply good judgment as well as statistical reasoning in arriving at appropriate interpretations.
