The second edition of Eliciting Sounds: Techniques and Strategies for Clinicians is a quick, easy-to-use compendium of techniques for immediately evoking any phoneme targeted for remediation. This new edition of our classic resource continues to provide the most clinically relevant information in a compact, accessible format. No clinical speech-language pathologist should ever be without Eliciting Sounds. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This software provides a technology-based treatment preparation and planning tool for speech-language pathologists. It provides step-by-step instruction for eliciting consonant and vowel sounds, including challenging phonemes like /r/, /s/, and /a/. The organization of the material allows you to locate the target sound, production characteristics, and accompanying techniques.

This text provides students with the information needed to properly assess childhood language disorders and decide appropriate treatments. The book covers language development from birth to adolescence.

Treating older children and adolescents who have difficulty correctly producing /r/ sounds remains an ongoing source of frustration for many clinicians. The new professional resource Remediation of /r/ for Speech-Language Pathologists provides the most up-to-date information on the current understanding of /r/ and the related errors, along with a range of treatment options, to offer a comprehensive tool for Speech-Language Pathologists (SLPs) treating this complex issue. In addition to a discussion of traditional articulation therapy and ways to improve the administration of this technique, this practical text offers a detailed review and explanation of several very promising alternative approaches. Written in what has been described as Dr. Flipsen's \"folksy\" style, this text is designed for the busy clinician. The first five chapters of Remediation of /r/ for Speech-Language Pathologists delve into the basic information needed to treat /r/. The next six chapters each tackle a specific treatment option. The treatment section begins with a re-examination of traditional articulation therapy and uses research evidence to help clinicians to fine-tune its application. It then progresses to discussing more significant modifications to traditional therapy and introduces several newer approaches to modifying the feedback being provided to the client. For each treatment option, the author presents a solid rationale and the latest evidence, along with practical strategies for their implementation. The final chapter discusses methods for deciding which remediation method to choose when working with /r/ errors.

This publication is the revised edition of the Cued Articulation range. The previously separate titles Cued Articulation and Cued Vowels are now combined and updated, with this edition covering consonants, vowels, demonstrative images, and full color coding throughout. The book was originally devised to help severely speech and language handicapped children to see a sound and hear a letter by the use of easy and logical hand cues. The Cued Articulation system has, over the last three decades, proved to be an invaluable teaching tool. Its potential and practicality is widespread and utilized by speech pathologists, speech and language therapists, remedial and reading recovery teachers who find the approach helpful in showing phoneme-grapheme relationships, and primary teachers who use it in the classroom to teach children the sounds of speech. Teachers who teach correct pronunciation to those who have English as a second language also find it extremely useful, as do teachers of the hearing impaired who want their students to see the sounds they cannot hear. Also available to compliment the book is an instructional, interactive DVD (# 9780864319180), which includes demonstrations of the cues and sounds.

Clinical Management of Speech Sound Disorders: A Case-Based Approach meets the need of speech language pathology instructors who work with children who demonstrate articulation and phonological disorders. This text presents an overview of case-based learning as an introductory chapter and the application in the discipline of speech-language pathology and focus on various evidence-based approaches for treating children with speech sound disorders.

Includes over 100 flannel board figures in full color to motivate young children with speech-language difficulties. Activities focus on initial & final consonant sounds, beginning digraphs & blends, end blends, & final sh & th sounds.

\"The second edition of Interventions for Speech Sound Disorders in Children is an essential resource for pre-service speech-language pathologists and practicing SLPs. It provides a comprehensive overview of 21 evidence-based phonological and articulatory intervention approaches, offering rigorous critical analyses, detailed implementation guidelines, and helpful demonstration videos\"--

\"For the second edition, a new chapter, written by Dr. Carlin Hageman, offers a motor learning perspective on assessing and treating the late eight. In addition, the companion DVD has been expanded to include 10 demonstration videos showing a motor learning perspective. Resources for each late-acquired sound include: Technical and non-technical definitions; Age of acquisition; Common errors; Key phonetic environments; Useful metaphors; Touch cues; Initial screening tests; Stimulability tests; Demonstrations of place, manner, and voicing; Phonetic placement and shaping techniques; Speech exercises, language awareness and speech activities; Lists of words divided by phonetic and word environments; Minimal pairs. A companion DVD contains reproducible 'cheat sheets,' exercises, and word lists for clinical use\"--Back cover.
