From the late nineteenth century until World War I, a group of Columbia University students gathered under the mentorship of the renowned historian William Archibald Dunning (1857--1922). Known as the Dunning School, these students wrote the first generation of state studies on the Reconstruction -- volumes that generally sympathized with white southerners, interpreted radical Reconstruction as a mean-spirited usurpation of federal power, and cast the Republican Party as a coalition of carpetbaggers, freedmen, scalawags, and

former Unionists. Edited by the award-winning historian John David Smith and J. Vincent Lowery, *The Dunning School* focuses on this controversial group of historians and its scholarly output. Despite their methodological limitations and racial bias, the Dunning historians' writings prefigured the sources and questions that later historians of the Reconstruction would utilize and address. Many of their pioneering dissertations remain important to ongoing debates on the broad meaning of the Civil War and Reconstruction and the evolution of American historical scholarship. This groundbreaking collection of original essays offers a fair and critical assessment of the Dunning School that focuses on the group's purpose, the strengths and weaknesses of its constituents, and its legacy. Squaring the past with the present, this important book also explores the evolution of historical interpretations over time and illuminates the ways in which contemporary political, racial, and social questions shape historical analyses.

There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book
