Would you ask a honeybee to point at a screen and recognise a facial expression? Or ask an elephant to climb a tree? While humans and non-human species may inhabit the same world, it's likely that our perceptual worlds differ significantly. Emphasising Uexküll's concept of 'umwelt', this volume offers practical advice on how animal cognition can be successfully tested while avoiding anthropomorphic conclusions. The chapters describe the capabilities of a range of animals - from ants, to lizards to chimpanzees - revealing how to successfully investigate animal cognition across a variety of taxa. The book features contributions from leading cognition researchers, each offering a series of examples and practical tips drawn from their own experience. Together, the authors synthesise information on current field and laboratory methods, providing researchers and graduate students with methodological advice on how to formulate research questions, design experiments and adapt studies to different taxa.

of these events, embedded deeply in the realia of the land itself, helps us better understand the living context in which these events took place. When we develop a skill set that allows us to read the land of the Bible as fluently as we might read the text, we stand not only to gain a better appreciation of the divine-human events of Scripture, we also gain an understanding of how these events become relevant to us in our own particular living contexts. Chapters include: Exploring the World of the Bible Building Blocks of Biblical Geography The Land of Ancient Israel: The Southern Regions (Judah/Judea) The Land of Ancient Israel: The Central Regions (Israel/Samaria) The Land of Ancient Israel: The Northern Regions (Galilee) Transjordan Afterword: Geography of the Heart Biblical geography has great apologetic value. The biblical writers had to be accurate when presenting geographical material. Unlike some matters of history and doctrine, their assertions about the realities of land forms and climate, or about the relation of one city to another, or about the use of strategic routes could easily be verified both by their first readers as well as by contemporary readers. Verifiable geographic information provides a solid foundation on which to place and evaluate the veracity of other truth claims in the biblical text.

A New York Times Bestseller Winner of the James Beard Award for General Cooking and the IACP Cookbook of the Year Award "The one book you must have, no matter what you're planning to cook or where your skill level falls."—New York Times Book Review Ever wondered how to pan-fry a steak with a charred crust and an interior that's perfectly medium-rare from edge to edge when you cut into it? How to make homemade mac 'n' cheese that is as satisfyingly gooey and velvety-smooth as the blue box stuff, but far tastier? How to roast a succulent, moist turkey (forget about brining!)—and use a foolproof method that works every time? As Serious Eats's culinary nerd-in-residence, J. Kenji López-Alt has pondered all these questions and more. In *The Food Lab*, Kenji focuses on the science behind beloved American dishes, delving into the interactions between heat, energy, and molecules that create great food. Kenji shows that often, conventional methods don't work that well, and home cooks can achieve far better results using new—but simple—techniques. In hundreds of easy-to-make recipes with over 1,000 full-color images, you will find out how to make foolproof Hollandaise sauce in just two minutes, how to transform one simple tomato sauce into a half dozen dishes, how to make the crispiest, creamiest potato casserole ever conceived, and much more.
