engineering, will soon create effective machines as small as DNA. This capacity to manipulate matter—to program matter—with atomic precision will utterly change the economic, ecological, and cultural fabric of our lives. This book, which is accessible to a broad audience while providing references to the technical literature, presents a wide range of potential applications of this new material technology. The first chapter introduces the basic concepts of molecular engineering and demonstrates that several mutually reinforcing trends in current research are leading directly into a world of surprisingly powerful molecular machines. Nine original essays on specific applications follow the introductory chapter. The first section presents applications of nanotechnology that interact directly with the molecular systems of the human body. The second presents applications that function, for the most part, outside the body. The final section details the mechanisms of a universal human-machine interface and the operation of an extremely high resolution display system.

When Lily Raff McCaulou traded in an indie film production career in New York for a reporting job in central Oregon, she never imagined that she'd find herself picking up a gun and learning to hunt. She'd been raised as a gun-fearing environmentalist and an animal lover, and though a meat-eater, she'd always abided by the principle that harming animals is wrong. But Raff McCaulou's perspective shifted when she began spending weekends fly-fishing and weekdays interviewing hunters for her articles, realizing that many of them were more thoughtful about animals and the environment than she was. So she embarked upon the project of learning to hunt from square one. From attending a Hunter Safety course designed for children to field dressing an elk and serving it for dinner, she explores the sport of hunting and all it entails, and tackles the big questions surrounding one of the most misunderstood American practices and pastimes. Not just a personal memoir, this book also explores the role of the hunter in the twenty-first century, the tension (at times artificial) between hunters and environmentalists, and new models of sustainable and ethical food procurement.
