Ideal for use with any introductory physics text, Loyd's PHYSICS LABORATORY MANUAL is suitable for either calculus- or algebra/trigonometry-based physics courses. Designed to help students develop their intuitive abilities in physics, the third edition has been updated to take advantage of modern equipment realities and to incorporate the latest in physics education research. In each lab, author David Loyd emphasizes conceptual understanding and includes a thorough discussion of physical theory to help students see the connection between the lab and the lecture. Each lab includes a set of pre-lab exercises, and many labs give students hands-on experience with statistical analysis. Equipment requirements are kept at a minimum to allow for maximum flexibility and to make the most of pre-existing lab equipment. For instructors interested in using some of Loyd's experiments, a customized lab manual is another option available through the Cengage Learning Custom Solutions program. Now, you can select specific experiments from Loyd's PHYSICS LABORATORY MANUAL, include your own original lab experiments, and create one affordable bound book. Exploring Biology in the Laboratory: Core Concepts is a comprehensive manual appropriate for introductory biology lab courses. This edition is designed for courses populated by nonmajors or for majors courses where abbreviated coverage is desired. Based on the two-semester version of Exploring Biology in the Laboratory, 3e, this Core Concepts edition features a streamlined set of clearly written activities with abbreviated coverage of the biodiversity of life. These exercises emphasize the unity of all living things and the evolutionary forces that have resulted in, and continue to act on, the diversity that we see around us today.

Dayton Miller, American physicist in the early twentieth century, known for research on medical x-rays and musical sounds, sought evidence for the luminiferous ether, joining the worldwide debate about relativity.
