The term 'software visualisation' refers to the graphical display of characteristics and behaviour of all aspects of software: design and analysis methods, systems, programs and algorithms. The purpose of this book is to collect and compare different experiences of software visualisation both from fundamental and applied viewpoints. The book is divided into four parts, covering important aspects of software visualisation. Part 1 covers a survey on existing software visualisation tools and environments, the strategies for making a software visualisation system language independent, and program animation for C language. Part 2 presents topics and techniques on graph drawing, which supports efficient and aesthetically pleasing visualisation. Some recently developed graph drawing systems and techniques used are described. Part 3 discusses visual programming concepts and techniques for supporting parallel and heterogeneous distributed programming. Part 4 includes several case studies of software visualisation, concentrating on the broader field of software engineering ranging from software metrics to reverse engineering.

Sustainable interdisciplinarity focuses on human-nature relations and a multitude of contemporary overlapping research between society and the environment. A variety of disciplines have played a large part in better understanding sustainable development since its high-profile emergence approximately a quarter of a century ago. At present, the forefront of sustainability research is an array of methods, techniques, and growing knowledge base that considers past, present, and future pathways. Specific multidisciplinary concentrations within the scope of societal changes, urban landscape transformations, international environmental comparative studies, as well as key theories and dynamics relating to sustainable performance are explored. Specializations in complex sustainability issues address international governance arrangements, rules, and organizations—both public and private—within the scope of four themes: sustainability, human geography, environment, and interdisciplinary societal studies. This book contains eleven thoroughly refereed contributions concerning pressing issues that interlink sustainable interdisciplinarity with the presented themes in terms of the human-nature interface.
