Based on sound research and first-hand experience in the field, *Subtitling through Speech Recognition: Respeaking* is the first book to present a comprehensive overview of the production of subtitles through speech recognition in Europe. Topics covered include the origins of subtitling for the deaf and hard of hearing, the different methods used to provide live subtitles and the training and professional practice of respeaking around the world. The core of the book is devoted to elaborating an in-depth respeaking course, including the skills required before, during and after the respeaking process. The volume also offers detailed analysis of the reception of respeaking, featuring information about viewers' preferences, comprehension and perception of respoken subtitles obtained with eye-tracking technology. An accompanying DVD features a wealth of video clips and documents designed to illustrate the material in the book and to serve as a basis for the exercises included at the end of each chapter. The working language of the book is English, but the DVD also contains sample material in Dutch, French, Galician, German, Italian and Spanish. *Subtitling through Speech Recognition: Respeaking* is designed for use as a course book for classroom practice or as a handbook for self-learning. It will be of interest to undergraduate and postgraduate students as well as freelance and in-house language professionals. It will also find a reading public among broadcasters, cinema, theatre and museum managers, as well as the deaf and members of deaf associations, who may use the volume to support future campaigns and enhance the quality of the speech-to-text accessibility they provide to their members.

A child with developmental dyslexia or an adult with a reading disorder following brain damage might read the word shoe as 'show', why does this happen? Most current information processing models of reading distinguish between two alternative procedures for the pronunciation of a printed word. The difference between these concerns the level at which orthography is translated to phonology in one, the word-level procedure, a word is read aloud with reference to knowledge specific to

that whole word. In the other, the sub-word-level procedure, a printed word is pronounced with reference to knowledge about smaller segments which occur in many different words. Both procedures contribute to normal skilled reading and its acquisition. But if one of the procedures is disrupted, then oral reading will be forced to rely on the alternative routine. Surface dyslexia is a general label for any disorder of reading which results from inadequate functioning of the word-level procedure and in consequence abnormal reliance on sub-word level translation from orthography to phonology. Originally published in 1985, this book provides new evidence about the diverse manifestations of surface dyslexia in adult neurological patients and in children with developmental disorders of reading. The data are drawn from speakers of a range of languages with distinct orthographies. Process models for the pronunciation of print are elaborated, and an appendix gives neurological information on the patients reported.

This book constitutes the refereed proceedings of the 10th International Conference on E-Learning and Games, Edutainment 2016, held in Hangzhou, China, in April 2016. The 36 full papers presented were carefully reviewed and selected from 60 submissions. They are organized in the following topical sections: E-learning and game; graphics, imaging and applications; intelligent data analytics and visualization.

Comprehensive textbook on phonetics, with examples from over 500 languages.

This book addresses the subject of emotional speech, especially its encoding and decoding process during interactive communication, based on an improved version of Brunswik's Lens Model. The process is shown to be influenced by the speaker's and the listener's linguistic and cultural backgrounds, as well as by the transmission channels used. Through both psycholinguistic and phonetic analysis of emotional multimodality data for two typologically different languages, i.e., Chinese and Japanese, the book demonstrates and elucidates the mutual and differing decoding and encoding schemes of emotional speech in Chinese and Japanese.

This is the first comprehensive study of the intonation of different languages of the world, written by a team of leading scholars in the field, most of whom are native speakers of the language in question. Surveying twenty languages, the volume introduces a new system for the multi-lingual transcription of intonation patterns. The chapters are organised following the same general outline to highlight the differences between languages. The emphasis is on description and comparison, rather than on theory, making this an invaluable sourcebook for researchers in the field.

This monograph exemplifies a trend in grammatical theory in which researchers combine findings from more than one area of linguistics. Specifically, the author looks at the relationship between phrasal prominence and focus in Romance and Germanic languages to provide insights into how these properties are grammatically articulated. Building upon prominence (nuclear stress) reflects syntactic ordering. There are two varieties of syntactic ordering. The first is the standard asymmetric

Read PDF Sennheiser Pc166 User Guide

c-command ordering. The second is the ordering derived from the primitive relation of selection holding between a head and its associated argument.

B.B.U.S.A. Leo, an ordinary Realtor in Boise, Idaho, is suddenly thrust into the role of decoy for his family and avenger of the murder of his business partner, Tim. Leo receives a mysterious flash drive in the mail from Tim after his death. The B.B.U.S.A. Organization fears that Leo knows too much. Leo seeks assistance from his best friend, Major Doug Corrigan, in an attempt to break the password on the flash drive which may be the only thing that will keep him and his family alive. The novel is action packed, and follows Leo and Doug as they desperately try to stay one step ahead of the B.B.U.S.A. From the west coast of the United States to the west coast of southern Africa, Leo and his family experience extraordinary highs and lows. The characters come alive in this vivid portrayal of courage, endurance, friendship and love. From beautiful descriptions of the harsh Namib Desert, to refreshing scenery in the rugged central Idaho wilderness area, this novel will leave you breathless with a sense of adventure, a feeling for the characters, and a thrill of excitement. The B.B.U.S.A. cannot fail. Too much is at stake. They will stop at nothing. Who can Leo trust, and on which side is the handsome Romanian? Leo once considered Florin as a brother, but can he trust him with his life?

Finely illustrated and exceptionally readable, this fourth edition of the leading text in Speech and Hearing Science, is dedicated to the habilitation and rehabilitation of the speech and hearing impaired. This comprehensive and highly popular text provides a solid foundation in the anatomy and physiology of respiration, phonation, articulation, neurology, and hearing. Now in its fourth edition, this classic text has been thoroughly updated and features a highly readable format, clearer illustrations, and the addition of a second color. Clinically relevant materials punctuate the entire text, as well as in-depth supplemental and clinical notes. Key terms are boldfaced, and numerous new illustrations create dramatic visual impact.

Provides instructions on using Microsoft Windows XP, covering such topics as working with programs, managing files and folders, using the Internet, networking, and managing printers.
